1. Remove the seat from the shipping carton and place it in an upright position with the mounting flanges placed firmly against the wall to be mounted to. (If you ordered the optional mounting flanges, be sure to replace them with the rubber feet on the rear legs.)

2. Level the seat at its desired height (17-19") by adjusting the rubber feet on the bottom of each leg. Mark the 3 holes on each flange.

3. Drill the 9 holes with the appropriate size bit according to your application. We recommend proper backing in the wall or *Wingits fasteners for dependable mounting integrity.

4. Use the appropriate mounting screws to attach the seat tightly to the wall and then tighten the locknuts on each of the leveling bolts on the bottom of each leg.

CAUTION: Failure to tighten these locknuts can easily cause product failure.

Please call 877-853-7816 (Allen) if you have further questions.
