

Fabrifoam® Products introduces

GUARDION™

A New Technology in Far Infrared & Anion Therapy

GuardION's™ advanced, proprietary formula offers an exciting, wearable therapeutic protocol for the treatment of musculoskeletal ailments, injuries and so much more.

By incorporating the benefits of **Far Infrared**, **Anions** and **Silver** into our medical-grade materials, GuardION™ provides a new approach to quick, safe and effective non-invasive care.

Far Infrared (FIR), part of the electromagnetic spectrum, penetrates the skin, emitting safe far infrared rays, positively activating body systems and functions.

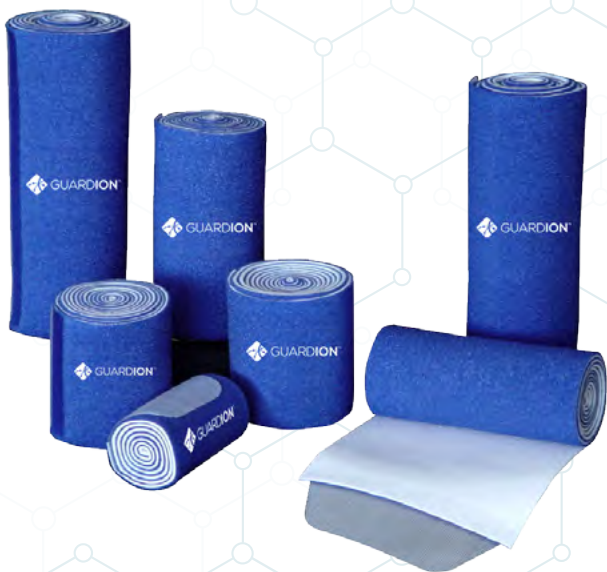

Anions are negatively charged ions, a microscopic subatomic particle found in nature. Their antimicrobial characteristics enable them to provide a multitude of health benefits. A silver component is added into the mix for additional antimicrobial power.

Independent lab tests confirm that these beneficial components:

- **Enhance blood flow and oxygenation**
- **Reduce pain, swelling and inflammation**
- **Accelerate the natural healing process**

They can suppress bacteria and mold growth and energize the body.

GuardION™ is non-toxic, comfortable and easy to apply with hook & loop closure. As with our original Fabrifoam® materials, GuardION™ is slip-resistant, latex and neoprene free, breathable, durable, washable and reusable.

GuardION™ - Far Infrared & Anion Therapy - the future of healthcare today.
