

Pelvic Health Testimonials

I have used Prometheus biofeedback equipment for the past 4 years and it's easy to use. Patients are more motivated when they can see what their pelvic floor is doing when performing exercises.

- Erica G., PT

I use only the best modalities in my clinic. The Prometheus PATHWAY® STM-10 along with a vaginal or rectal EMG/stimulation sensor, helps patients perform their Kegel exercises more efficiently, resulting in better and faster outcomes.

- Andrea D., PT

I teach biofeedback in our DPT program and I always use the PATHWAY® MR or PATHWAY® TR series EMG biofeedback units from The Prometheus Group® in my labs. The units have all of the options we need for customizing settings for each patient yet they are easy for the students to understand and use.

I know they will be prepared to use EMG biofeedback in the clinic when they need to.

- Dr. Kiley G.

I use the (PATHWAY® CTS 1500, PATHWAY® TR-10 and PATHWAY® TR-20 series) for a wide variety of patients. It's a great brand and very user friendly.

I learned about the equipment while taking APTA and H&W courses and it's all I've used.

- Dr. DeVonnia B., PT, DPT, WCS, CLT-LANA, RYT

Stimulation therapy helps patients perform their pelvic floor strengthening exercises more effectively, resulting in better and faster results.

- Sarah H., PT, MPT

People frequently ask me how pelvic floor rehabilitation can help children. As a specialist and pelvic floor and the pediatric population I would love to share the relationship between the pelvic floor and bowel/ bladder problems in children. Children suffer from bed wetting, urinary leakage and fecal leakage frequently caused by lack of coordination of the pelvic floor muscles along with other comorbidities such as constipation. This lack of coordination causes the child to contract the PFM when they should be relaxing and visa versa.

- Dawn S., PT, RCMT, BCB-PMD
