POSITIONING OUR VETERANS FOR NIGHTTIME SHOULDER RELIEF

The MedCline Shoulder Relief System is a three-component Sleep Positioning System designed for those suffering with chronic shoulder pain at night caused by tendonitis, bursitis, rotator cuff injuries, post-operative recovery, or general shoulder injuries.

MedCline is the only Sleep System available through the VA, which allows your patients to get the quality sleep they need -- without shoulder pain at night.

ORDER THROUGH THE VA TODAY!

• **Relieves Pressure.** Patented arm pocket relieves shoulder pressure so your patients can sleep comfortably on their side.

• **Gradual Incline.** Gentle 10° angle of elevation props your patients up just high enough to take the pressure off the arm and shoulder.

• **Symmetrical Design.** Patients can sleep on the right or left side. Wide enough so patients can easily turn throughout the night.

• **Flexible Arm Positions.** Patients can position their arm either out straight onto the bed surface or tucked under their pillow.
