

## MOBIDERM PADS

Mobiderm is made up of foam blocks encased between two non-woven bandages. It can be used under a reducing bandage (in its bandage or pad forms), or incorporated into mobilizing garments. Due to the difference in pressure created between the support area of the blocks and their surrounding area, it promotes the flow of lymphatic fluid and optimizes the drainage efficacy.

### Key Features:

- Stimulates the flow of lymphatic fluid
- Light and comfortable, enables the patient to keep their freedom
- Contours to extremities
- Soft on skin
