

Environmental hygiene is more important than ever. So, you have the right cleaner ... but are your surfaces ready for cleaning?

A damaged surface cannot be cleaned no matter what type of disinfectant you use. When a mattress cover is compromised by a puncture or tear, the damage site may harbour pathogens that can be passed on to other patients. **The Joint Commission recommends** avoiding “any holes in upholstery or mattresses. Patch any holes or tears with an approved product that can be cleaned and disinfected (that is, no tape).”¹

Made in Canada, CleanPatch®-V is a clinically validated repair solution. It is also the only CE-Mark and FDA-registered medical surface repair patch that restores damaged surfaces to an intact and cleanable state. Simply put, CleanPatch®-V protects patient safety, saves you money on equipment, and saves you time by keeping beds in service.

- ✓ **PATIENT SAFETY:** repair damaged surfaces with CleanPatch¹ so they can be disinfected properly.
- ✓ **COST SAVINGS:** Offset the recent rise in spending PPE and cleaning agents by repairing instead of replace².
- ✓ **KEEP BEDS IN SERVICE:** repair damaged equipment quickly and easily to minimize equipment downtime; a quick and effective repair is especially important when beds are in high demand.
